Structural basis of higher-order assembly formation in Toll-like receptor 1,2 and 6 signaling pathway

Thursday, 25 November 2021 18:35 (1 minute)

Innate immunity represents a typical and widely distributed form of immunity. Innate immune responses are the first line of defense against pathogens, which can help destroy invaders invertebrate animals, invertebrates, and plants. The innate immune system recognizes microorganisms via pattern-recognition receptors (PRRs). The family of Toll-like receptors (TLRs) is a distinct group of PRRs. They detect the microbial components known as pathogen-associated molecular patterns (PAMPs), activate downstream transcription factors such as nuclear factor- κ B (NF- κ B), resulting in a pro-inflammatory response. 10 TLRs have been identified in the human TLR family. In humans, TLR2 can form heterodimers with TLR1 and TLR6 when binding different types of ligands. The cytoplasmic Toll/interleukin-1 receptor (TIR) domain can be found in all TLRs and is responsible for transmitting extracellular signals to intracellular cytoplasmic TIR domain-containing adaptor proteins through TIR: TIR domain interactions, thus initiating downstream signaling. Two TIR-domain containing adaptor proteins, Myeloid differentiation primary response 88 (MyD88) and MyD88 adaptor-like (MAL) mediate downstream signaling in the TLR2-TLR1/6 signaling pathway. It has been previously demonstrated that higher-order assembly formation occurs in the TLR4 signaling pathway. The mechanism, which is known as signaling by cooperative assembly formation (SCAF), may occur in all TLR signal transduction. To date, the transduction mechanisms of TLR2-TLR1/6 signaling are still unclear. This research aims to determine the structural basis of higher-order assemblies formed by TIR domains with a focus on assemblies in the TLR2-TLR1/6 signaling.

Presenter Gender

Woman

Do you wish to take part in the Student Poster Slam

Yes

Condition of submission

Yes

Students Only - Are you interested in AINSE student funding

Yes

Level of Expertise

Student

Pronouns

She/Her

Which facility did you use for your research

None of the above

Primary authors: LI, YAN (The University of Queensland); Dr NANSON, Jeffrey D; Prof. KOBE, Bostjan

Presenter: LI, YAN (The University of Queensland)

Session Classification: Poster Session

Track Classification: Biomedicine, Life science & Food Science
