

Support of user focused graphical applications through the epicsQt framework

Sunday, 18 October 2015 15:30 (20 minutes)

With ongoing development of epicsQt, user focused EPICS graphical applications keep getting easier to develop. If you are simply dragging and dropping from the widget set provided with epicsQt, using other widget sets such as caQtDM, building your own widget plugins, or coding entire applications, epicsQt supports the creation of applications that focus on the user. The tools within the epicsQt framework that help develop you a rich application, rather than just present a set of synoptic displays, are presented.
