## Development of high power irradiation accelerators in China

Wednesday, 12 April 2023 14:20 (20 minutes)

Irradiation accelerator use high power electron beam in the application of processing of food, medical product, quarantine treatments. Different types of RF linacs are developed in China at the electron beam energy of 10MeV and the beam power of 24kW. This presentation will focus on the basic theory of electron linacs and the improved design to obtain a high-power beam. The experiment results are discussed as well.

### Speaker's Title

Dr.

### Speaker's Gender

Man

### Speaker's Preferred name (if any)

### Speaker's Pronouns

He/Him

### Speaker's Name

Jiaru Shi

Primary author: SHI, Jiaru (Tsinghua University)

Presenter: SHI, Jiaru (Tsinghua University)

Session Classification: Room 1 (Laby Theatre)

Track Classification: WG3: Accelerator technologies for industrial & medical applications
