Type: Poster

Synthesis of Multinuclear Lanthanoid Complexes with 2-Methyl-8-hydroxyquinoline

Lanthanoid-8-quinolinolates and its derivatives have attracted a lot of interest due to their structures and behaviour as single molecular magnets [1-3]. A few multinuclear of lanthanoid complexes with 2-methyl-8-hydroxyquinoline (HMQ) were successfully synthesized at elevated temperature using a Teflon Sealed autoclave. It was observed that heating the mixture above the boiling point of the solvent produces dinuclear, trinuclear and tetranuclear compounds as products.

Are you a student?

Yes

Do you wish to take part in the Student Poster Slam?

No

What is your gender?

Female

Primary author: Ms GHAZALI, Nurul F. (School of Chemistry, Monash University)

Co-authors: Dr TURNER, David R. (School of Chemistry, Monash University); Prof. DEACON, Glen B. (School of Chemistry, Monash University); Prof. JUNK, Peter C (School of Science and Technology, James Cook University)

Presenter: Ms GHAZALI, Nurul F. (School of Chemistry, Monash University)

Track Classification: Advanced Materials
