EPICS on Red Pitaya

Friday, 16 November 2018 11:30 (5 minutes)

Red Pitaya is a small board equipped with Xilinx Zynq SOC and Cortex A9. It has 2 14-bit, 125 MS/s RF inputs and outputs as well as slow analogue and digital inputs and outputs. We've written an asyn port driver for it and it is currently used in a few applications across the Australian Synchrotron without any problems.
