## A model for developing control systems for vendor supplied beamlines

Friday, 16 November 2018 09:30 (20 minutes)

To support the evolution towards standard control systems at the Australian Synchrotron controllers for all future beamlines will be developed in-house, even though the beamlines themselves will be constructed by external vendors. This talk presents a collaborative model that has been developed to integrate in-house control systems with vendor supplied equipment.
